Technical Catalogue

Edition 2019/2020

Mitas Technical Catalogue for Agricultural Tyres – Edition 2019 / 2020

The extensive technical data and other information relating to tyres and accessories on the following pages has been compiled to reflect as accurately and completely as possible the current state of development. Due to changes in our product range the tyre sizes given in this guide are not always identical to our available range.

Mitas brand, part of Trelleborg group, is one of Europe's leading tyres brands for agricultural machines, construction vehicles, material handling equipment, motorcycles, bicycles and other specialty segments. Mitas tyres are being produced in the Czech Republic, the United States, Serbia, Slovenia and promoted through a global sales and distribution network.

For further information please contact us:

Trelleborg Wheel Systems Czech Republic a.s.

Contents

Tread patterns, markings and definitions

List of tread patterns	4
List of tyre sizes	6
Tyre size marking	10
Speed symbols and conversion tables	11
Tyre sidewall marking and structures	12
Load index	13
Main applications chart	14

Tractor Radial Tyres

HC 1000, HC 2000 – VF tyre (Very High Flexion)	16
SFT – Super Flexion Tyre	24
SST – Silent Speed Tyre	36
AC 65 – 65 series	40
HC 70 – 70 series	48
AC 70 T – 70 series	54
AC 70 G – 70 series	62
AC 85 – standard	66
AC 85 / AC 90 – Row Crop	76

Harvester Radial Tyres

HC 3000 - VF tyre, CFO series – drive wheel	86
CHO – drive wheel	90
SFT & AC 70 H/G/N – drive wheel	96
SFT, AC 70 G, AC 65 IMP – steering wheel	106
Conversion table – tractor and harvester radial tyres	112

Trailer Radial Tyres

Agriterra 02, 03 & 04	116
AR – Agricultural radial	122

Municipal, Agro-industrial and Multipurpose Tyres

HCM – High Capacity Municipal radial	128
Ti-20 & Ti-22 – Agro-industrial radial	134
AC 70 G & MPT-22 – Multipurpose radial (MPT)	138
Agro-industrial diagonal	146

Tractor Diagonal Tyres

AF – Tractor Agro Forestry	156
TD – Tractor Drive (diagonal)	160

Implement Diagonal Tyres

IM – Implement Non Traction	172
TR – Implement Traction	182

Other Tyres

TS & B – Tractor Small	190
TF – Tractor Front	198
B & V – Bantam	208

Use and Maintenance

U.S. Tread pattern marking	210
Use and Maintenance	211
Fitting and removal instructions	212
Liquid ballasting of tractor tyres	213
Explanations referring to tractor tyres	218
Explanations referring to IMP/MPT tyres	220
Rim specification	222
Terms and abbreviations used in this catalogue	226

- Sidewall
- Apex
- Bead Wire

DIAGONAL (CROSS-PLY, BIAS) TYRE

A pneumatic tyre in which the ply cords extend to the beads and are laid substantially at alternate angles less than 90° to the centre-line of the tread.

RADIAL PLY TYRE

A pneumatic tyre in which the ply cords extend to the beads and are laid substantially at 90° to the centre-line of the tread, the carcass being stabilised by an essentially inextensible circumferential belt.

Main applications – Radial Tyres

We offer a wide range of tyres for almost every piece of equipment and application – from high-horsepower tractors to massive harvesters, from field preparation to harvest.

Our extensive line of radial agricultural tyres offers solutions to all your needs, from our **High Capacity Tyres (HC)** and **Super Flexion Tyres (SFT)** series or our wide footprint **HC 70** and **AC 65** series tyres to our **AC 85** and **AC 90** series for row-crop applications.

The development of the **Silent Speed Tyres (SST)**, connects the outstanding field characteristics of a 65 series wide tyre with high comfort. Because with the SST the noise level in the operator's cab is reduced to a minimum. The **High Capacity Tyres (HC)** and **Super Flexion Tyres (SFT)** were developed primarily for powerful machines with over 180 hp. The extremely large volume of air ensures gentle ground handling when working with heavy loads. The new harvester tyres **HC 3000** and **SFT CHO** have been designed as an extremely powerful

tyres for big combine harvesters. **HC 3000** and **SFT CHO** are capable of higher maximum loads; at the same time the tyre permits gentler ground handling in the field and more comfort on the road. For tractors with up to 200 hp, the Mitas range of radial tyres offers wide choice of all-rounders. The 85 series standard radial **AC 85** is ideally suited for wide-ranging applications in the field and on the road. The **HC 70** the new 70 series wide tyre, has higher load capacities than normally available in the 70 series segment; it therefore offers gentler

ground handling and can carry very heavy loads. The **AC 65** is a wide tyre with a 65% aspect ratio and is the ideal choice in this tractor segment, where it's about gentle ground handling and the ability to transport heavy loads, as well as traction and grassland suitability. The **AC 70 G** is the acknowledged grassland tyre in Mitas portfolio. The **AC 70 T** is particularly suited for heavy field work. In the smaller sizes it has proved itself in vine cultivation and fruit growing.

HC 2000 – VF tyre (Very High Flexion)

For high-horsepower tractors

Lower inflation pressure provides **excellent traction efficiency**.

Better ground protection thanks to reduced soil compaction.

Higher load capacity for higher haulage efficiency.

**Constant tyre pressure
at any speed (VF concept)**
For a load capacity 2 930 kg

■ 540/65 R 30 Standard
■ Mitas VF 540/65 R 30 HC 2000

HC 1000 – Narrow VF tyre

For self-propelled sprayers

More lugs provide **better durability, longer service life and lower operation cost**.

Higher maximum speed (65 km/h) for less time on the road.

Reduced soil compaction for higher loads thanks to lower inflation pressure.

HC 2000

* Further admissible rims on request

Load values for 0.4 bar and 0.6 bar are for calculating Dual and triple load values only.

For plowing with single driven tyres in the furrow, a minimum inflation pressure of 0.8 bar is required.

For intensive road transport at 65/50/40/30 km/h the pressure must be increased by 0.4 bar. Maximum inflation pressure should never be exceeded.

All load values are valid for ground slopes up to and including 20% (11°). When operating on slopes greater than 20%, please, contact the producer.

Tubeless tyres – may be used with a tube.

SFT

Super Flexion Tyre (SFT)

Maximum load capacity and traction for powerful machines

Developed for use on **high-horsepower tractors (> 180 hp) and combines.**

Flexible sidewalls allow low inflation pressures **for high load-carrying capacities**, gentle ground handling and higher yields.

Maximum traction and outstanding productivity thanks to transport speeds of 65 km/h and a large contact patch.

Conventional radial tyre

Mitas SFT radial tyre

Flexible sidewalls deliver maximum load capacity at the lowest possible inflation pressures for better traction and optimum soil protection, even with the heaviest equipment.

Super Flexion Tyre SFT

* Further admissible rims on request

Load values for 0.4 bar and 0.6 bar are for calculating dual and triple load values only. 30 km/h (up to 40 km/h) load values also apply for low-speed high-torque field work.

For plowing with single driven tyres in the furrow, a minimum inflation pressure of 0.8 bar is required.

For intensive road transport at 65/50/40/30 km/h the pressure must be increased by 0.4 bar. Maximum inflation pressure should never be exceeded.

All load values are valid for ground slopes up to and including 20% (11°). When operating on slopes greater than 20%, please, contact the producer.

Tubeless tyres – may be used with a tube.

SST

Silent Speed Tyre (SST)

Fast, powerful and impressively quiet

Noise reduction of up to 6 dB(A) in the cab maximises concentration and minimises stress.

New casing construction ensures a **cost saving through reduced rolling resistance, long tyre life and high damage resistance.**

Highest levels of productivity achieved through the excellent characteristics of the low profile and casing.

Highest possible sustained speed capability of up to 70 km/h.

The Silent Speed Tyre SST traction tyre prevents the occurrence of the so-called “booming noise effect”. The SST reduces the noise level in the driver’s cab by 3 to 6 dB(A) compared with conventional rear axle tyres.

AC 65

AC 65

Versatile wide tyre that delivers efficiency in field applications and in transport

Extremely economical thanks to very good traction and low-wear tread compound.

Very high load-carrying capacity through large volume of air.

Very gentle ground handling thanks to a very large contact patch and exceptional load-carrying capacities.

Greater operator comfort at road speeds as high as 65 km/h.

Standard tyre

Wide tyre AC 65

The very large contact patch permits high traction and gentle ground handling, even with heavy equipment.

* Further admissible rims on request

Load values for 0.4 bar and 0.6 bar are for calculating dual and triple load values only.
30 km/h (up to 40 km/h) load values also apply for low-speed high-torque field work.

For plowing with single driven tyres in the furrow, a minimum inflation pressure of 0.8 bar is required.

For intensive road transport at 65/50/40/30 km/h the pressure must be increased by 0.4 bar. Maximum inflation pressure should never be exceeded.

All load values are valid for ground slopes up to and including 20% (11°). When operating on slopes greater than 20%, please, contact the producer.

Tubeless tyres – may be used with a tube.

HC 70

HC 70

The all-round benchmark in the 70 series wide tyre segment with higher load capacities than conventional 70 series

Low operating costs thanks to minimised slip, plus gentle ground handling through high load capacity.

Comfortable, safe road performance, thanks to wide tyre shoulders.

Particularly **gentle handling of grassland** through rounded shoulder design and lug edges.

Low track depth and low operating costs, thanks to reduced inflation pressure and good traction.

HC 70

* Further admissible rims on request

Load values for 0.6 bar are for calculating dual and triple load values only.
30 km/h (up to 40 km/h) load values also apply for low-speed high-torque field work.
For plowing with single driven tyres in the furrow, a minimum inflation pressure of 0.8 bar is required.

For intensive road transport at 65/50/40/30 km/h the pressure must be increased by 0.4 bar. Maximum inflation pressure should never be exceeded. All load values are valid for ground slopes up to and including 20% (11°). When operating on slopes greater than 20%, please, contact the producer. Tubeless tyres – may be used with a tube.

AC 70 T

AC 70 T

Wide traction tyre for heavy field work

Deep lugs provide greater traction **in the field.**

Outstanding self-cleaning between lugs reduces slip and improves pulling power.

Tremendous durability and outstanding traction make this tyre very economical.

Standard tyre

Mitas AC 70 T

Deep high-grip lugs transmit traction, even on wet ground.

AC 70 T

Load values for 0.6 bar are for calculating dual and triple load values only.

30 km/h (up to 40 km/h) load values also apply for low-speed high-torque field work.

For plowing with single driven tyres in the furrow, a minimum inflation pressure of 0.8 bar is required.

For intensive road transport at 50/40/30 km/h the pressure must be increased by 0.4 bar. Maximum inflation pressure should never be exceeded.

All load values are valid for ground slopes up to and including 20% (11°). When operating on slopes greater than 20%, please, contact the producer.

Tubeless tyres – may be used with a tube.

AC 70 G

AC 70 G

Wide grassland tyre with optimum road characteristics

The large, wide lug areas **protect ground and plants**.

Stable, safe and comfortable running on the road, thanks to a wide tread area and large lug overlap in the tread centre.

Economical thanks to low wear.

Large, wide lug areas mean quiet running on the road and gentle driving over grassland.

- Conventional profile design
- AC 70 G Tread pattern

AC 85

AC 85

Modern design delivers outstanding performance, traction, durability, and long tyre life

Outstanding long tyre life thanks to the use of a wear-resistant tread compound.

Durable radial tyre with balanced characteristics for a wide range of applications both in the field and on the road.

Large contact patch enhances **traction**.

AC 85

* Further admissible rims on request

Load values for 0.6 bar are for calculating dual and triple load values only.

30 km/h (up to 40 km/h) load values also apply for low-speed high-torque field work.

For plowing with single driven tyres in the furrow, a minimum inflation pressure of 0.8 bar is required.

For intensive road transport at 65/50/40/30 km/h the pressure must be increased by 0.4 bar. Maximum inflation pressure should never be exceeded.

All load values are valid for ground slopes up to and including 20% (11°). When operating on slopes greater than 20%, please, contact the producer.

Tubeless tyres – may be used with a tube.

AC 85 / AC 90 Row Crop

Narrow tyres developed specially for row cultivation

Reduced tyre width eases driving between plants without causing damage, contributing to higher yields. Rounded shoulders, lugs and tyre height also protect crops.

Cost-efficient thanks to durable construction that offers high load capacity and transport speeds up to 65 km/h.

Deep lugs provide **excellent traction**, better directional stability and a high level of control.

Good self-cleaning properties help keep the tread pattern free of mud, resulting in less slip, even in difficult conditions.

AC 85 / AC 90 vs. standard size tyres

Narrow Row Crop tyres were specially developed for driving between rows without damaging the seeds, roots and plants. They are suitable for line weeding, crop cultivation, fertilising, spraying and other agricultural activities.

Reduced tyre width

Tractor fitted with Mitas narrow tyres

Tractor fitted with wide tread-width tyres

Rounded lugs

Row Crop

30 km/h (up to 40 km/h) load values also apply for low-speed high-torque field work.

For plowing with single driven tyres in the furrow, a minimum inflation pressure of 0.8 bar is required.

For intensive road transport at 50/40/30 km/h the pressure must be increased by 0.4 bar. Maximum inflation pressure should never be exceeded.

All load values are valid for ground slopes up to and including 20% (11°). When operating on slopes greater than 20%, please, contact the producer.

Load-pressure data for cyclic applications apply to low-torque transport operations at max. speeds of 10 km/h and for a max. distance of 800 meters before discharging the load and returning empty.

Tubeless tyres – may be used with a tube.

[#] Tread pattern HC 3000 R

Load values for 0.4 bar and 0.6 bar at 50 km/h are for calculating dual and triple load values only.

For plowing with single driven tyres in the furrow, a minimum inflation pressure of 0.8 bar is required.

For intensive road transport at 50/40/30 km/h the pressure must be increased by 0.4 bar. Maximum inflation pressure should never be exceeded.

All load values are valid for ground slopes up to and including 20% (11°). When operating on slopes greater than 20%, please, contact the producer.

Load-pressure data for cyclic applications apply to low-torque transport operations at max. speeds of 15 km/h and for a max. distance of 800 meters before discharging the load and returning empty.

By cyclic application (CFO) mean harvester's motion with full grain tank till its discharging.

CFO: Cyclic Field Operation

Tubeless tyres – may be used with a tube.

SFT CHO

CHO

Cyclic Harvesting Operation tyre.
The most gentle ground handling
tyre extending comfortably the
harvesting time frame

Harvester tyre with **maximum cyclic axle load capacity**.

Extremely low inflation pressure and more maximum load capacity at the same time.

Larger footprint than standard harvester tyres guarantees gentler ground handling and extends the harvesting time frame.

Due to its **compact, narrow construction** the tyre fulfils all legal requirements (limited vehicle width).

Vehicle width decrease

Mobility increase

Harvesting time frame

Extension of time frame for harvesting by reducing inflation pressure.

Harvester CHO drive wheel

* Further admissible rims on request

* In preparation, please contact Mitas for availability

Load values for 0.6 bar are for calculating dual and triple load values only.

30 km/h (up to 40 km/h) load values also apply for low-speed high-torque field work.

For plowing with single driven tyres in the furrow, a minimum inflation pressure of 0.8 bar is required.

For intensive road transport at 65/50/40/30 km/h the pressure must be increased by 0.4 bar. Maximum inflation pressure should never be exceeded.

All load values are valid for ground slopes up to and including 20% (11°). When operating on slopes greater than 20%, please, contact the producer.
 Load-pressure data for cyclic applications apply to low-torque transport operations at max. speeds of 10 km/h and for a max. distance of 800 meters before discharging the load and returning empty.
 By cyclic application (CHO) mean harvester's motion with full grain tank till its discharging.
 CHO: Cyclic Harvesting Operation
 Tubeless tyres – may be used with a tube.

Harvester drive tyres: AC 70 H/G/N and Super Flexion Tyre (SFT)

Innovative tyres for gentle ground handling with harvesters

High load capacities and low inflation pressures.

Minimized load placed on soil structure, thanks to the wide and even distribution of ground pressure.

Low vibration and smooth on-road ride when moving between fields.

Very productive and cost-efficient thanks to performance in the field and in transport.

Soil compaction comparison

The extremely wide tyres distribute the weight of the machine across the surface area, lowering the compaction of the soil.

Load values for 0.6 bar are for calculating dual and triple load values only.

30 km/h (up to 40 km/h) load values also apply for low-speed high-torque field work.

For plowing with single driven tyres in the furrow, a minimum inflation pressure of 0.8 bar is required.

For intensive road transport at 65/50/40/30 km/h the pressure must be increased by 0.4 bar. Maximum inflation pressure should never be exceeded.

All load values are valid for ground slopes up to and including 20% (11°). When operating on slopes greater than 20%, please, contact the producer.

Load-pressure data for cyclic applications apply to low-torque transport operations at max. speeds of 10 km/h and for a max. distance of 800 meters before

discharging the load and returning empty.

By cyclic application is means harvester's motion with full grain tank till its discharging.

Tubeless tyres – may be used with a tube.

Super Flexion Tyre (SFT IMP), AC 65 IMP & AC 70 G IMP

Tremendous flexion and load capacity make these tyres a great fit for the steering axle of a harvester

Outstanding traction thanks to very large ground contact patch.

High load capacity and optimal ground pressure distribution reduces soil compaction.

Long tyre life through optimized tread pattern design and high resistance to damage.

Suitable also for free-rolling field applications.

Agriterra

New generation of fast and powerful agricultural tyres

Agriterra 02 and 04 – **Gentle to grassland** due to high positive share and round shoulder.

Agriterra 03 – **Excellent self-cleaning properties** due to higher negative share and distinctive shoulder.

Low noise emission thanks optimized tread pattern.

Wide agricultural use: flat trucks, fast-moving agricultural trailers, tank containers etc.

The bigger tread pattern contact area

High operating economy on the road and in the field

Tested tyre size 600/55 R 26.5 IMP

* Further admissible rims on request

For intensive road transport at 65/50/40/30 km/h the pressure must be increased by 0.4 bar. Maximum inflation pressure should never be exceeded. All load values are valid for ground slopes up to and including 20% (11°). When operating on slopes greater than 20%, please, contact the producer. Tubeless tyres – may be used with a tube.

AR-01

Approved for high speed up to 80 km/h. Reduced fuel consumption. Prolonged working life.

AR-02

High-grip thanks to robust lugs. Optimal pressure distribution. Balanced handling on and off the road.

AR-03

Radial tyre designed for use on fastmoving self-loading forage boxes and trailers at speeds of up to 65 km/h. The larger footprint and low tyre pressure protect both grassland and soil. The tyre is also suitable for utility vehicles.

AR-04

Radial traction tyre for use on grassland. Ideally suited for working on slopes. Very quiet running on roads at speeds of up to 65 km/h. High mileage performance through optimist tread pattern design.

AR-05

The longitudinal and lateral structure of the tread pattern, combined with rounded tread shoulders, ensures low rolling resistance. The all-steel construction protects the tyre from damage. Approved for speeds of up to 100 km/h.

AR – Agricultural radial tyres with high load capacity and working speed

Main applications – Trailer radial tyres

Trailer Radial Tyres

Trailer Radial Tyres

Technical data and load capacities

Tyre size	Tread pattern	Service description LI/SS	Rims * (permitted)	Section width (mm)	Overall diameter (mm)	Loaded static radius (mm)	Rolling circumference (mm)

* Further admissible rims on request

For intensive road transport at 80/65/50/40/30 km/h the pressure must be increased by 0.4 bar. Maximum inflation pressure should never be exceeded. All load values are valid for ground slopes up to and including 20% (11°). When operating on slopes greater than 20%, please, contact the producer. Tubeless tyres – may be used with a tube.

High Capacity Municipal (HCM)

Universal quiet running tyre for all terrains and applications

Particularly suitable for municipal and road maintenance tractors and equipment. Designed for **all-season use**.

High durability due to steel belted radial construction and unique design of tread pattern in the central part.

Exceptional traction characteristics due to more edges on the lugs. Different lugs width in shoulder for better traction in deeper terrain.

Excellent self-cleaning and **very good steering characteristics**.

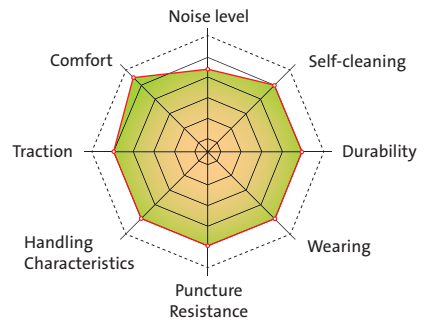

Low noise emission and vibration, thanks to different length of pitches and their alignment along circumference.

Pitches with the same length

Pitches with different length

Municipal tyres – reduction of noise emission

The same length of pitches – spectrum comprises periodic lines with high amplitude (all noise concentrated into multiple repeated basic frequency – formation of disturbing noise).

Different length of pitches and their alignment gives a spectrum with low amplitude – noise is divided into whole frequency range – reduction of disturbing noise.

TI series – universal radial tyres

For industrial and agricultural application

TI-20

New generation of tread pattern.

Suitable for **construction, road and agricultural work.**

Priority to traction.

Designed for **muddy conditions.**

Very good resistance to damage.

TI-22

Good traction and effective self-cleaning properties.

Excellent durability.

Suitable for backhoe loaders, wheeled loaders, telescopic handlers and similar vehicles for light service.

Also suitable for agricultural application.

Agro-industrial TI

AC 70 G

AC 70 G

Universal radial multipurpose tyre (MPT)

Stable, safe and comfortable running on the road, thanks to a wide tread area and large lug overlap in the tread centre.

Economical thanks to low wear.

Tyres in the MPT range have a special casing and steel belt for **high speeds up to 90 km/h**.

AC 70 G

* Further admissible rims on request

Overloading of the tyres is not permitted.

After 2 hours of driving on highways ½ hour stop for cooling down of the tyres.

Load values for 0.6 bar are for calculating dual and triple load values only.

30 km/h (up to 40 km/h) load values also apply for low-speed high-torque field work.

For plowing with single driven tyres in the furrow, a minimum inflation pressure of 0.8 bar is required.

For intensive road transport at 90/65/50/40/30 km/h the pressure must be increased by 0.4 bar. Maximum inflation pressure should never be exceeded.

All load values are valid for ground slopes up to and including 20% (11°). When operating on slopes greater than 20%, please, contact the producer.

Tubeless tyres – may be used with a tube.

AC 70 G

Excellent traction

MPT-01

Tread pattern with very good traction and self-cleaning properties. Suitable above all for loader applications.

Excellent traction

TD-10

Lugged tread pattern for powered axle.

Excellent traction

TR-01 (R-4)

Excellent traction pattern, suitable for industrial and agricultural application.

Excellent traction

TI-05 (R-4)

Robust industrial tread pattern with excellent traction properties.

Excellent traction

TD-03 (R-1)

Pattern suitable above all for harder conditions due to optimised number of lugs.

Agro-industrial diagonal tyres

Robust and durable tyres for various work

RESISTANCE	=====
TRACTION	=====
SELF-CLEANING	=====

TL-01

RESISTANCE	=====
TRACTION	=====
SELF-CLEANING	=====

AF-01 and TL-01

Heavy-duty agroforestry tractor tyres for the toughest conditions

High resistance to puncture due to reinforced construction and durable tread compound.

Great traction due to specially developed tread pattern.

Very good self-cleaning properties for better grip and less slip.

High load capability and transport properties.

Suitable for a wide range of uses in forestry and for heavy agricultural work.

Puncture resistance comparison

Thanks to reinforced construction, the radial force needed to puncture the AF-01 tyre is 35 % higher than in the case of the standard tractor drive tyre Mitas TD-19.

Radial force needed to puncture AF-01 and TD-19

Compared tyres:
Mitas 460/85 - 34 (18.4 - 34)
AF-01 and Mitas
18.4 - 34 TD-19

* Further admissible rims on request

For intensive road transport at 80/65/50/40/30 km/h the pressure must be increased by 0.4 bar. Maximum inflation pressure should never be exceeded. All load values are valid for ground slopes up to and including 20% (11°). When operating on slopes greater than 20%, please, contact the producer.

TD-01

Durable traction pattern, also suitable for industrial use.

TD-02

Universal tread pattern with excellent traction for a wide range of applications.

TD-05

Unique tread pattern with 23 degree inclined blocks for better traction and self-cleaning properties. The reinforced shoulder prevents side-slipping and helps overall tyre strength.

TD-13

A classic design for tractors, well-tested and proven.

TD-17

Pattern featuring increased tread lug depth giving better traction and less slip in difficult conditions.

TD-19

Traction tread pattern with larger rib surface in the central part.

TD series – tractor drive diagonal tyres

For tractors and other self-propelled
agricultural machinery

The inflation pressure must be increased for front-end loader tractor application +0.4 bar.
 For Non-standard version, please contact a producer.
 These tyres are for normal agricultural use and not for continuous highway service.

IM-01

Tested and proven tread pattern for transportation, also suitable for powered wheels.

IM-02

Tread pattern with excellent traction for a wide range of applications.

IM-03

A classic implement design for universal use.

IM-04

Modern universal tread pattern suitable for a wide range of agricultural uses.

IM-06

Ribbed pattern for all sorts of applications.

IM-07

Pattern with rolling rib profile without any lateral tread elements. Suitable for meadowland use or soil cultivation.

IM-08

Ribbed pattern without any lateral tread elements, suitable for meadowland use and transport service.

IM-09

Traction pattern with strong side lugs. Low inflation pressure for reduced soil compaction.

IM series – Implement Diagonal

Great transportation properties

IM-10

Ribbed pattern without any lateral tread elements. Suitable for soil cultivation and for light transport applications.

IM-11

Good track holding for trailed wheels due to rolling rib profile and strong side lugs.

AC 30

Robust tread pattern for construction vehicles.

B 3

Specially designed for garden tractors, large mowers and municipal tractors.

G 1

Perfect tread pattern for small machines and tools as lawn mowers.

B 19

Ribbed tread pattern with rounded shoulder. Good stability and self-cleaning properties. Ideal for small horticultural and hay making machinery.

B 63

Special tread pattern with good stability, lawn protection and comfort.

TR-01

Tread pattern with excellent traction, suitable for all self-propelled machines, agricultural loaders, small dump trucks and telescopic loaders.

TR-03

Universal traction pattern for different agricultural applications.

TR-04

All-round tread pattern with great traction for a wide range of agricultural uses.

TR-05

Time proven pattern for agricultural application with very good traction.

TR-06

Low-profile traction pattern for use in meadowlands, suitable for drive wheels.

TR-07

Low-profile tread pattern with great traction, recommended for meadowland use.

TR-08

Flotation pattern with reduced soil compaction due to low inflation pressure. Great traction, breaking performance and lateral stability.

TR-09

Traction pattern suitable for front wheels of backhoe loaders and wheel loaders.

TR series – Implement Diagonal Traction tyres for wide agricultural application

TR-10

Tread pattern suitable above all for **bigger skid-steer loaders or self-propelled plat-forms**. Recommended also for front wheels of back-hoe loaders.

TR-11

Tread pattern with robust lugs, ensuring very good traction. Suitable for **loaders and side dumpers**.

TR-12

Pattern with excellent traction, developed for **powered wheels of agricultural and industrial machinery**. Applicable for trailed wheels as well.

TS-01

Classic tread pattern with excellent traction.

TS-02

Universal traction pattern for a wide range of gardening applications.

TS-03

Tread pattern with deep and robust lugs for greater traction.

TS-04

All-round tread pattern with excellent traction.

TS-05

Pattern with very good traction and handling. Also suitable for light industrial use.

TS-06

Improved tread pattern with great traction.

TS-07

Pattern specially developed for seed drill machines for soil compaction. Applicable for drive wheels as well.

TD-10

Lugged tread pattern for powered axle.

Tractor small tyres

For all kinds of gardening equipment

TD-13

A classic tread pattern design, well-tested and proven.

B 12

Universal traction pattern for a wide range of gardening applications.

B 16

Tread pattern with deep and robust lugs for greater traction.

B 17

Lugged tread pattern with excellent traction.

B 18

Universal tread pattern with great traction.

B 64

Universal traction pattern for a wide range of gardening applications.

These tyres are for normal agricultural use and not for continuous highway service.

TF-01

Multi-rib tread profile without any lateral tread elements and side lugs.

TF-02

Multi-rib tread pattern with short, strong shoulder lugs. Secure track holding and good climbing capabilities when steering out of the furrow.

TF-03

Multi-rib tread pattern with very strong shoulder lugs and lateral tread elements.

TF-04

Pattern with high stability in track due to deep relief of design.

TF-05

Designed for non-driven tractor wheels. Improved on-road performance and straight-line steering characteristics.

TF-06

Pattern with very long service life and excellent steering characteristics, mainly on soft terrain.

Tractor front tyres with balanced properties

For perfect handling on and off the road

IM-05

Special tread pattern developed for steering wheels of industrial tractors.

Use and Maintenance

Storage

- > Keep the tyres clean and away from heat, light, ozone or hydrocarbon sources.
- > Avoid prolonged exposure of the tyres to direct sunlight.
- > Avoid any contact with grease, petrol, volatile solvents or other substances that may deteriorate the rubber.
- > Avoid horizontal storage for tubeless tyres, only small size tyres may be stacked or stored flat (maximum 6 months).
- > When tyres are stored flat (horizontal), the position must be lug against lug.
- > Reduce inflation pressure when tyres are stored fitted on rims.
- > Ensure there is no water or moisture inside the tyre.
- > Never store tyres directly in contact with the ground for long periods.

Tyre repairs

- > For safety reasons, repairs should only be carried out by specialists using the correct tools.

Proper use of tyres

- > When loading tyres you have to consider the correlation between speed, inflation pressure and load capacity.
- > Overloading results in premature tyre failure. Use the technical documentation and inflation tables which show the load and pressure figures for different operating speeds.
- > Underinflation results not only in incorrect tread wear but also in ply separation and eventually further damage to the ply.
- > Overinflation makes the tyre stiff and decreases its resistance against hits, leading to ply tear.

Check inflation pressure regularly.

Avoid contact with grease, oil and other chemicals.

Inspect tyres for damage and irregularities.

Observe tyre and vehicle load limits.

Read safety and maintenance recommendations.

Use only authorised repair.

Fitting and removal instructions

Demounting and mounting procedures can be dangerous, and should be performed only by trained and qualified staff, using proper tools and procedures. Failure to comply with these procedures may result in faulty positioning of the tyre on the rim, and cause the tyre to burst with explosive force leading to serious physical injury or death.

Fitting

1. Make sure that the rim, the tyre and the tube are compatible.
2. Check that the tyre is suitable for the machine. Use only rims recommended or permitted by the tyre manufacturer.
3. Always use the proper specialised equipment and tools.
4. The rim must be clean and in perfect condition (no damage, etc.). If necessary, clean the rim thoroughly with a wire brush. Never fit a tyre onto a rim that shows cracks, significant distortion, evidence of welded repair, etc.
5. Thoroughly inspect the inside as well as the outside of the tyre in order to identify any damage which may be present. If the damage is considered to be beyond repair, the tyre should be scrapped.
6. If fitting with a tube, always use the correct new tube and flap for the tyre size. For fitting tubeless tyres without tubes, on tubeless rims, always use a new tubeless valve.
7. Before fitting, lubricate the rim and the beads. Use only a suitable lubricant that will not damage the tyre (never use silicone or petroleum-based products).
8. We recommend vertical fitting. In case of horizontal fitting it is impossible to see if the lower bead is correctly seated.
9. Fit the tyre on the rim diametrically opposite to the valve hole (respect, if present, the rotation direction indicated by the arrows). With the help of a suitable lever and closely repeated applications, get the first bead over the rim flange. Then pose the lightly inflated talc coated tube (if fitted) inside the tyre. Locate the valve, fitting the ferrule loosely. Fit the second bead, lever it progressively over the rim flange, finish at the valve.
10. For seating the beads and centring of the tyre, remove the valve core. Slowly inflate to ensure correct seating of the beads. Ensure that the beads do not pinch the tube.
11. During tyre inflation keep at a safe distance and always use a safety cage. If possible, fasten the tyre to the wall or use retaining chains. During pressure readings ensure that no part of the body is within the possible trajectory of the valve mechanism or of the caps. It is recommended to use suitable pressure limitation gauges. Use a filter and dehumidifier on the compressed air line to avoid introducing humidity or dirt. Never use a hammer to make a tyre bead seat by hitting it.
12. Continue inflation. Make sure that you do not inflate beyond 2.5 bar if the beads are not well seated and centred on the wheel.
13. If the beads are not correctly seated, deflate, lubricate and inflate again. Repeat these operations until the beads are correctly seated.
14. When all the previous operations have been correctly done refit the valve core. Set the pressure according to the load – see tables in technical databook.
15. Make sure the valves do not touch the rims, the brake drums or other fixed mechanical parts.

Removing

- > Never try to unseat the beads of an inflated tyre.
- > Always remove the valve core.
- > Let the tyre deflate, check before unseating that the tyre is completely deflated. Never use tools that could damage the rims or the beads of the tyre.

Liquid ballasting of tractor tyres

In some cases, it is necessary to add weight to tyres to increase traction power. Filling the tyre with a liquid (water) is a simple and inexpensive way. It is possible to add liquid to the tyres up to 75% of their volume. In winter, to avoid the water damaging the tyres when it freezes, suitable quantities of anti-freeze must be added.

Instructions for adding liquid

1. Jack the wheel up and position the valve at the highest vertical point.
2. Unscrew the removable valve body from the valve and connect a combined air-water fill and draining valve to the valve chunk. Air can be removed from the tyre through this valve while the water is entering.
3. Introduce the water or anti-freeze mixture into the tyre. Stop filling when liquid starts to issue from the valve. The quantity of liquid added will be about 75%. Do not over-fill!
4. Replace the valve body and inflate the tyre to the recommended operating pressure.
5. Clean all metal parts – anti-freeze solution is corrosive.

Instructions for draining liquid

1. Jack the wheel up and position the valve at the lowest vertical point.
2. Unscrew the valve core and let the water drain out.
3. Attach a small rubber hose of suitable length to the locking washer and insert the hose into the tyre tube, then screw the washer down over the stem of the valve.
4. Inflate the tyre with air.
5. Remove the internal valve stem and let the remaining water drain from the tyre.
6. Remove the rubber hose and reassemble the valve. Inflate with air up to the recommended pressure.

Anti-freeze solution

- > As protection against frost, it is recommended to add Calcium Chloride (CaCl_2). If a tubeless tyre is mounted, we recommend that the rim should be treated against corrosion or an inner tube must be used.
- > Remember – prepare the solution by pouring the Calcium Chloride into the water, stirring to help it dissolve. Never pour water on to Calcium Chloride, it is dangerous.

CaCl_2 per litre of water	Protection to
200 g	-10 °C
250 g	-15 °C
300 g	-20 °C
350 g	-25 °C
400 g	-30 °C

Explanations referring to tractor tyres

Tables on page 24 to 105, 158 to 173 and 200 to 209

Load capacity and speed

When determining the minimum tyre size necessary for a vehicle, the approved axle load and the maximum design speed of the vehicle should always be used as the basis.

Nominal load capacity = 100 % load, as indicated by the Load Index (LI), see page 13.

In the case of twin-fitted driven wheels, a factor of 1.76 is applied to the load capacity of a single-fitted tyre.

Tyre pressure

The tyre pressures given in the tables are minimum tyre pressures and should be used as a guide only.

The given max. air pressures may not be exceeded. All tyre pressures refer to the "cold" tyre which has been standing outdoors for several hours, not exposed to intense sunlight.

For twin fitments of radial tyres on tractors (to minimise ground pressure) a min. tyre pressure of 0.4 bar is allowed.

The Static Loaded Radius is the distance between centre of wheel and paved ground measured at reference load and pressure.

The Rolling Circumference (at reference load and reference pressure) is the distance a tyre covers with one revolution on paved surface. Measurement acc. to ISO 11795.

The Speed Radius Index (SRI) is by convention a parameter used exclusively for calculation of theoretical speed of tractors. In no case SRI can be used as measurable value of rolling circumference.

Instead of W or W...L rims, the same size in DW or DWW may be used if the flange height is the same. (Designation of rims see pages 220.)

D	+130%	+70%	+40%	+34%	+23%	+18.5%	+15%	+12%

Speed (km/h)	40	45	50	55	60	65	70
Speed Category A6	-20%	–	–	–	–	–	–
A8	(0)	-4%	-9%	–	–	–	–
D	+9.5%	+7%	+5%	+3%	+1.5%	(0)	-9%

All Field Applications:

A6 Tyres – loads as in the Table

A8 Tyres – loads as in the Table plus 7%

The Inflation Pressure must be increased for:

- road transport and long-distance transport with semi-trailer +0.3 bar
- harvesting machines and front-end loader tractor application +0.4 bar

Tractor Front – Steering Wheels

Speed (km/h)	10 *	15	20	25	30	35	40	45
Speed Category A6	+50%	+43%	+35%	+15%	(0)	-10%	-20%	
A8	+67%	+50%	+39%	+28%	+11%	+4%	(0)	-7%

* Basic Inflation Pressure must be increased about 25%.

If a front-end loader is fitted on the tractor, +100% applies.

Explanations referring to IMP/MPT tyres

Tables on page 106 to 127 and 174 to 199

IMP = Implement tyres

MPT = Multi purpose tyres

Load capacity and speed

When determining the minimum tyre size necessary for a vehicle, the approved axle load and the maximum design speed of the vehicle should always be used as the basis.

Nominal load capacity = 100 % load, as indicated by the Load Index (LI), see page 13.

Tyre pressure

The tyre pressures given in the tables are minimum tyre pressures and should be used as a guide only.

The given max. air pressures may not be exceeded.

All tyre pressures refer to a “cold” tyre which has been standing outdoors for several hours, not exposed to intense sunlight.

The static radius is for the new tyre laden at the max. load capacity and at the corresponding tyre pressure as per the table concerned.

The rolling circumference corresponds to the max. load capacity (100%) and is inflated at the corresponding tyre pressure as per the table concerned. At 50% of the max. load capacity the rolling circumference is increased by approx. 1% for a radial tyre and by approx. 1.8% for a cross-ply tyre on the drive wheel of an agricultural tractor.

Rims. Only the rims indicated in this data book are approved for fitting to new vehicle series.

 – drive wheel

 – free rolling wheel

	HLV	+193%	+100%	+90%	+80%	+70%	+60%	+50%	+43%	+36%	+29%

LLV = Low Load Variation

HLV = High Load Variation, is where the tyre load varies by a factor of "2" or more between loaded and unloaded conditions.

The inflation pressure for HLV application must be increased, consult tyre manufacturer.

In the case of HLV, the maximum distance should not exceed 1 km. For a longer distance, consult tyre manufacturer.

Terms and abbreviations used in this catalogue

Acronyms	Meaning	Definition
PR	Ply Rating	Identifies different versions (load capacity/inflation pressure) of tyres having the same size designation.
TYPE	Tubeless or Tube Type	Tubeless (TL) – Tyres specifically designed for fitment without an inner tube on appropriate rims. Tubeless tyres may be used with a tube.
LI	Load Index	Is a numerical code associated with the maximum load a tyre can carry at the speed indicated by its Speed Symbol under service conditions specified by the tyre manufacturer.
SS	Speed Symbol	Indicated the maximum speed at which the tyre can carry a load corresponding to its Load Index under service conditions specified the tyre manufacturer.
	Free Rolling Wheels	Free rolling wheels, that not transmit motion, e.g. trailer
	Drive Wheels	Drive wheels, that transmit motion, e.g. drive wheel axle on tractors
RIM	Recommended Rim	The rim which gives the best fitment of the tyre for all conditions and types of service.
RIM (PERMITTED)	Permitted Rim	Any rim which can be permitted in addition to the recommended rim.
	New Tyre Dimensions	The dimensions of an unloaded new tyre mounted on its Measuring Rim at the recommended inflation pressure and allowed to stand for a minimum of 24 hours at normal room temperature before readjustment of the pressure back to its original level.
	Section Width (design)	The linear distance between the outsides of the sidewalls of an inflated new tyre excluding elevations due to labelling (marking), decorations, or protective bands or ribs.
	Overall Diameter (design)	The diameter of an inflated tyre at the outermost surface of the tread.
	Static Radius (theoretical nominal)	The radius of the new tyre loaded at the maximum load capacity and with the corresponding tyre pressure.
	Rolling Circumference (theoretical nominal)	The circumference of the tyre loaded at the maximum load capacity and with the corresponding tyre pressure.

Acronyms	Meaning	Definition
LOAD CAPACITY	Tyre Load Carrying Capacity	The maximum load (kg) a tyre is permitted to carry under specified operating conditions. In the case of twin-fitted driven wheels, a factor of 1.76 is applied to the load capacity of a single fitment tyre.
	Inflation Pressure	The “cold” pressure (kPa) of the fluid with which the tyre is inflated.
HLV	High Load Variation	Is where the tyre load varies by a factor of “2” or more between loaded and unloaded conditions. The inflation pressure for HLV application must be increased, consult tyre manufacturer. In the case of HLV, the maximum distance should not exceed 1 km and maximum speed 10 km/h. For a longer distance or higher speed, consult tyre manufacturer. Example of purpose: without HLV – normal use with constant load in transport service, on tractor in field service, e.g. trailer, tractor; with HLV – use with various load conditions, factor > 2 between loaded and unloaded, e.g. loaders
LLV	Low Load Variation	Standard application with low load difference between loaded and unloaded conditions.
WATER 75%	Capacity of Water	Capacity of water for Water balasting.
ETRTO	The European Tyre and Rim Technical Organisation	Data in this Technical Databook are relevant with ETRTO standards, the further data you can find there.
SRI	Speed Radius Index	The Speed Radius Index is by convention a parameter used exclusively for the calculation of the theoretical speed of tractors during European Union homologation procedures and for interchangeability of different tyre sizes.
	Nominal Section Width	The section width of an inflated tyre mounted on its theoretical rim and indicated in the tyre size designation.
IND		Agricultural tyres for traction wheels for construction applications with load capacities and inflation pressures which differ from those for tyres which the same size designation for use on agricultural tractors.
REINFORCED		Tyres with better protection against tyre damage (puncture). The load capacity and tyre dimensions stay like standard execution.

Trelleborg Wheel Systems Czech Republic a.s.
Švehlova 1900/3, 106 00 Prague 10, Czech Republic

Trelleborg Wheel Systems is fully compliant with the limits on Polycyclic Aromatic Hydrocarbons (PAHs) determined by the European Directive EC/2005/69 and REACH Regulation EC/1907/2006, since December 1st 2009.
